Personal Portfolio

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, Kotlin, HTML/CSS, SQL, Go
Frameworks/Libraries: React, React-Native, Next.js, Zustand, Zod, TailwindCSS, Spring Boot, Tanstack Query
Databases/ORMs: MySQL, PostgreSQL, MongoDB, Firebase, Prisma, DrizzleORM
Development Tools: Git, Snowflake, DataGrip, Graphite, Docker, Stripe, Postman, Redis, AWS, Vercel, Braze

EXPERIENCE

- Backend Engineer** | *Kotlin, TypeScript, Next.js, MySQL, Snowflake* Jan 2026 – Apr 2026
Faire Waterloo, ON
- Extracted a brand loyalty program from the monolith into a dedicated microservice, migrating 15+ database entities, 10+ endpoints, and quarterly batch jobs behind a feature flag for gradual rollout
 - Shipped a Shopify price sync option letting merchants sync only wholesale or retail prices, preserving manually curated pricing for 1,000+ brands and reducing unintended price overrides
 - Built a Snowflake-driven email pipeline in Braze that nudged 2,000 merchants to enable price sync, using milestone records to guarantee idempotent intro and reminder sends
 - Designed catalog-level case pack normalization, converting case-priced inventory and orders to unit-level to fix inflated prices and deflated stock counts across the Shopify integration
- Fullstack Engineer** | *Next.js, React, TypeScript, Tailwind* May 2025 – Aug 2025
Faire Waterloo, ON
- Designed a product review incentive system that drove a 60% increase in total reviews submitted by retailers
 - Built an admin dashboard for tracking product reviews and resolving merchant-reported issues at scale
 - Contributed to a MobX refactor of 30+ components to modernize state management and improve maintainability
 - Rolled out features behind Eppo experimentation flags and tracked user analytics for data-informed decisions
 - Built an internal staging tool for generating mock orders, cutting QA setup time from minutes to seconds
- Fullstack Engineer** | *React, React-Native, Node.js, MySQL* Sep 2024 – Dec 2024
Blaise Transit Montreal, QC
- Developed an admin pricing override feature, securing a \$10,000+ contract with Muskoka Transit
 - Refactored 20+ legacy class components to use custom React hooks and TypeScript for future maintainability
 - Integrated 10+ REST endpoints with Axios, including custom invoice generation and region-specific pricing
 - Resolved location tracking and fare calculation bugs in the React Native rider app, improving trip reliability
- Software Engineer** | *React, TypeScript, OpenAI-3.5, Cypress* Jan 2024 – Apr 2024
WE Accelerate Waterloo, ON
- Built an Azure OpenAI-powered chatbot that streamlined clinical data retrieval for healthcare professionals
 - Fine-tuned the model with NLP techniques on peer-reviewed medical articles, improving response accuracy by 25%
 - Wrote 15+ unit and end-to-end tests in Cypress to harden chatbot reliability across deployment environments

PROJECTS

- Code Clash** | *Next.js, TypeScript, PostgreSQL, DrizzleORM, Supabase*
- Built a real-time 1v1 competitive coding platform supporting 5 languages with a Monaco editor and a Piston-backed execution pipeline that generates per-language driver code for complex input types
 - Designed a tiered ELO ranking system with atomic match resolution via UPDATE...RETURNING to handle near-simultaneous submissions, plus per-user history charts and a top 100 leaderboard
 - Architected a hybrid real-time layer combining TanStack Query polling with Supabase Broadcast events for instant rematch notifications, secured with Better-Auth OAuth
- AI PDF Summarizer** | *Next.js, TypeScript, TailwindCSS, DrizzleORM, OpenAI-4.5*
- Built an AI-powered summarization tool that extracts insights from multi-page PDFs via the OpenAI API
 - Implemented Clerk authentication with persistent per-user document storage for saved summaries across sessions
 - Designed a type-safe DrizzleORM and PostgreSQL data layer for document metadata and summary persistence

EDUCATION

University of Waterloo Waterloo, ON
Computer Engineering (cGPA - 3.9) Expected 2027
