Personal Portfolio

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, Kotlin, HTML/CSS, SQL, Go
Frameworks/Libraries: React, React-Native, Next.js, Zustand, Zod, TailwindCSS, Spring Boot, Tanstack Query
Databases/ORMs: MySQL, PostgreSQL, MongoDB, Firebase, Prisma, DrizzleORM
Development Tools: Git, Snowflake, DataGrip, Graphite, Docker, Stripe, Postman, Redis, AWS, Vercel, Braze

EXPERIENCE

Software Engineer Intern Jan 2026 – Apr 2026
Faire (YC W17) Waterloo, ON

- Re-architected the brand loyalty domain by decomposing it from the monolith into its own Kotlin microservice, **cutting build time by 95%** by migrating 15+ database entities, 10+ endpoints, and 5+ quarterly batch jobs
- Engineered a configurable price-sync system in Faire's Shopify integration, **preserving manually curated prices for 30,000+ products** and **unblocking onboarding for 1,000+ brands** using Next.js
- Built a Snowflake-driven email pipeline in Braze **targeting 2,000 brands to enable price syncing from Shopify**, using milestone records to guarantee unique intro and reminder sends
- Resolved local Shopify authentication and settings serialization issues, improving dev environment stability

Software Engineer Intern May 2025 – Aug 2025
Faire (YC W17) Waterloo, ON

- Designed and shipped a post-order product review incentive program with **Eppo-driven A/B testing**, driving a **60% increase in retailer-submitted reviews** and boosting product recommendations on the homepage
- Built an admin dashboard for tracking over **20,000+ backfilled product reviews** across all brands, making it easier for admins to resolve brand-reported issues on reviews
- Drove a **refactor of 30+ legacy components** using in house agents, replacing **MobX stores** and class components with **Zustand and React hooks** to simplify state management and improve maintainability
- Built an internal staging tool for generating mock orders with configurable retailers, brands, and order states, **cutting end-to-end testing time by 90%** across the org

Software Engineer Intern Sep 2024 – Dec 2024
Blaise Transit Montreal, QC

- Secured a **6-figure contract with a major transit agency** by developing a full-stack admin tool in **React and Express.js** that lets dispatchers override trip prices to support agency-specific pricing rules
- Refactored the pricing engine that serves **5,000+ daily users** by integrating more accurate geolocation and dynamic fare calculation based on trip distance, scheduling, and transit service constraints
- Migrated 20+ React class components to custom hooks and **TypeScript**, cutting **3,000+ lines** from codebase
- Resolved location tracking and fare calculation bugs in the **React Native** rider app, improving trip reliability

Software Engineer Intern Jan 2024 – Apr 2024
WE Accelerate Waterloo, ON

- Developed an AI chatbot using the **Azure OpenAI-3.5** that helps healthcare professionals query medical records
- Wrote **15+ unit and end-to-end tests** in Cypress to harden chatbot reliability across deployment environments

PROJECTS

Code Clash | Next.js, TypeScript, PostgreSQL, DrizzleORM, Supabase

- Built a real-time 1v1 competitive coding platform with sandboxed code execution across 5 languages using a **Hetzner VPS** to self-host the **Piston API with Docker**
- Implemented real-time multiplayer sync for opponent submissions, rematch invitations, leaderboards, and match history using **Supabase Realtime** and **TanStack Query**
- Designed an ELO-based matchmaking system with atomic database transactions to prevent race conditions

AI PDF Summarizer | Next.js, TypeScript, TailwindCSS, DrizzleORM, OpenAI-4.5

- Built an AI-powered summarization tool that extracts insights from multi-page PDFs via the OpenAI API
- Implemented **Clerk authentication** with persistent per-user document storage for saved summaries per session

EDUCATION

University of Waterloo Waterloo, ON
Computer Engineering (cGPA - 3.9) Expected 2027
